Section	Topic	Page
Chapter 1	Introduction to Database Systems	pp. 1–44
	Chapter Overview	1
1.1	Introduction to Database Systems	4
1.2	Characteristics — Database vs File System	4
1.3	Database Users	5
1.4	Advantages of Database Systems	6
1.5	Database Applications	7
1.6	Data Models (Hierarchical, Network, Relational, ER, OO, OR, Semi-Structured, Physical)	8
1.7	Schema	15
1.8	Instance	15
1.9	Data Independence (Physical & Logical)	15
1.10	Three-Tier Schema Architecture	16
1.11	Database System Structure	18
1.12	Centralized and Client–Server Architecture	21
1.12.1	Centralized Database Architecture	21
1.12.2	Client–Server Database Architecture	22
1.13	Entity–Relationship (ER) Model: Introduction	23
1.14	Representation of Entities	24
1.15	Attributes (Simple, Composite, Multi-Valued, Derived, Key)	25
1.16	Entity Set	28
1.17	Relationship	28
1.18	Relationship Set	29
1.19	Constraints (Cardinality: 1:1, 1:N, M:N; Participation: Total/Partial)	30
1.20	Superclass and Subclass (Specialization & Generalization / EER)	34
1.21	Inheritance	35
1.22	Specialization	36
1.23	Generalization	37
	Chapter Summary	40
	Review Questions	43
Chapter 2	Relational Model	pp. 45–88
	Chapter Overview	45
2.1	Concept of Domain	48
2.2	Attribute	48
2.3	Tuple	49
2.4	Relation	50
2.5	NULL Values and Their Importance	50
2.6	Introduction to Constraints	51
2.6.1	Domain Constraints	51
2.6.2	Key Constraint	52
2.6.3	Integrity Constraint	52
2.7	Relational Algebra	53
2.7.1	Introduction to Relational Algebra	53

2.7.2	Properties of Relational Algebra	53
2.7.3	Basic Relational Algebra Operators (With Worked Examples)	54
2.7.4	Aggregate Functions In Relational Algebra	57
2.8	Relation Calculus	58
2.8.1	Introduction to Relation Calculus	58
2.8.2	Types of Relation Calculus	59
2.8.3	Relational Algebra VS Relation Calculus	66
2.9	Simple Database Schema	66
2.9.1	Meaning and Purpose of a Database Schema	66
2.9.2	Examples of a Simple Database Schema	66
2.9.3	Conceptual Schema figure (Description)	67
2.10	SQL Data Types	67
2.10.1	Role of Data Types in SQL	67
2.10.2	Categories of SQL Data Types	67
2.10.3	Summary Table of SQL Data Types	71
2.11	SQL Command Classification	71
2.11.1	Data Definition Language (DDL)	71
2.11.2	Data Manipulation Language (DML)	76
2.11.3	Data Control Language (DCL)	79
2.11.4	Transaction Control Language (TCL)	81
	Chapter Summary	84
	Review Questions	86

Chapter 3 SQL pp. 89–146

	Chapter Overview	89
3.1	Basic SQL Querying — SELECT and WHERE Clause	92
3.2	Arithmetic and Logical Operations in SQL	94
3.2.1	Arithmetic Operations	94
3.2.2	Logical Operations (AND, OR, NOT, BETWEEN, IN, LIKE)	95
3.3	SQL Functions	97
3.3.1	Date and Time Functions	98
3.3.2	Numeric Functions	98
3.3.3	String Functions	99
3.3.4	Conversion Functions	100
3.4	Creating Tables with Relationships	101
3.5	Implementation of Key and Integrity Constraints	104
3.5.1	Key Constraints (Primary Key)	105
3.5.2	Integrity Constraint	108
3.5.3	Assertion of Integrity Constraints	110
3.6	Nested Queries	111
3.7	Subqueries (Single-row, Multi-row, EXISTS, Correlated)	114
3.8	Grouping in SQL (GROUP BY, HAVING)	118
3.9	Aggregation in SQL (COUNT, SUM, AVG, MIN, MAX)	121
3.10	Ordering in SQL (ORDER BY)	125
3.11	Implementation of Different Types of joins in SQL	129
3.12	Views in SQL (Updatable & Non-Updatable)	132

3.12.1	Updatable Views	133
3.12.2	Non-Updatable Views	135
3.13	Relational Set Operations in SQL (UNION, INTERSECT, EXCEPT)	136
	Chapter Summary	141
	Review Questions	144
Chapter 4	Schema Refinement & Normalization	pp. 147–172
	Chapter Overview	147
4.1	Introduction to Schema Refinement	150
4.2	Data Redundancy and Update Anomalies	150
4.2.1	Update Anomaly	151
4.2.2	Insertion Anomaly	151
4.2.3	Deletion Anomaly	151
4.3	Functional Dependency (Definition, Types)	151
4.3.1	Definition of Functional Dependency	151
4.3.2	Illustrative Example	152
4.3.3	Types of Functional Dependencies	152
4.4	Normal Forms based on Functional Dependency	153
4.4.1	First Normal Form (1NF)	153
4.4.2	Second Normal Form (2NF)	155
4.4.3	Third Normal Form (3NF)	157
4.4.4	Boyce–Codd Normal Form (BCNF)	158
4.5	Decomposition of Relations	160
4.5.1	Need for Decomposition	160
4.5.2	Lossless Join Decomposition	160
4.5.3	Dependency-Preserving Decomposition	161
4.6	Surrogate Key	161
4.7	Multivalued Dependencies and Fourth Normal Form	162
4.7.1	Definition of Multivalued Dependency	162
4.7.2	Fourth Normal Form (4NF)	163
4.8	Fifth Normal Form (5NF)	164
4.8.1	Definition	164
4.9	Comparison of Normal Forms	165
	Chapter Summary	167
	Review Questions	169
Chapter 5	Transaction Concepts, Concurrency & Recovery	pp. 173-234
	Chapter Overview	173
5.1	Transaction Concepts & Transaction States	176
5.2	ACID Properties of Transactions	177
5.3	Concurrent Executions (Schedules, Serial vs Concurrent)	179
5.3.1	Schedules in Concurrent Execution	180
5.3.2	Types of Schedules	180
5.4	Serializability (Conflict & View Serializability)	182
5.5	Recoverability of Schedules (Recoverable, Cascadeless, Strict)	186
5.6	Implementation of Isolation Levels	188

5.7	Testing for Serializability (Conflict Graph Method)	189
5.8	Lock-Based Protocols	195
5.8.1	Two-Phase Locking (2PL) Protocol & Variants	195
5.9	Timestamp-Based Concurrency Control Protocol	199
5.9.1	Basic Timestamp Ordering Protocol (TO)	200
5.9.2	Thomas' Write Rule	201
5.9.3	Multi-Version Timestamp Ordering (MVTO)	203
5.10	Optimistic Concurrency Control (OCC)	204
5.10.1	Phases of OCC (Read, Validate, Write)	204
5.10.2	Validation Techniques	206
5.11	Deadlocks (Conditions, Detection, Handling)	208
5.12	Failure Classification (Transaction, System, Media)	211
5.13	Storage Hierarchy, Stable Storage, WAL & Checkpoints	213
5.14	Recovery Algorithms (Deferred, Immediate, UNDO/REDO, Shadow Paging)	216
5.15	Shadow Paging Recovery Algorithm	218
5.16	Introduction to Indexing Techniques	219
5.17	B+ Tree Indexing (Properties, Structure)	220
5.18	Operations on B+ Trees (Search, Insert, Delete)	221
5.19	Hash-Based Indexing (Static, Dynamic, Extendible, Linear)	225
	Chapter Summary	228
	Review Questions	232
