

CONTENTS

Chapter I · Introduction to Machine Learning

Chapter Overview	1
1.1 Evaluation of Machine Learning.....	2
1.1.1 Historical Milestones	2
1.2 Paradigms for Machine Learning.....	3
1.2.1 Supervised Learning	3
1.2.2 Unsupervised Learning	4
1.2.3 Semi-Supervised Learning.....	4
1.2.4 Reinforcement Learning	5
1.3 Learning By Rote.....	5
1.4 Learning by Induction.....	6
1.4.1 The Inductive Bias	7
1.4.2 Inductive Learning and Generalization	7
1.5 Reinforcement Learning.....	8
1.5.1 The Agent-Environment Interaction	8
1.5.2 Key Concepts in Reinforcement Learning.....	8
1.6 Types of Data	9
1.6.1 By Measurement Scale.....	9
1.6.2 By Structure	10
1.6.3 By Temporal Character	10
1.6.4 Feature Types within a Dataset.....	10
1.7 Matching.....	11
1.7.1 Distance Metrics for Numeric Data	11
1.7.2 Similarity Measures for Text and Sets.....	12
1.8 Stages in Machine Learning	12
1.9 Data Acquisition	13
1.9.1 Sources of Data	13
1.9.2 Data Quality Considerations	13
1.9.3 Data Labeling.....	14
1.10 Feature Engineering.....	14
1.10.1 Feature Selection.....	15
1.10.2 Feature Extraction and Transformation	15
1.10.3 Feature Creation.....	15

1.11 Data Representation.....	16
1.11.1 Vector Space Representation	16
1.11.2 Representation for Structured Data Types	17
1.11.3 Dimensionality and the Curse of Dimensionality	17
1.12 Model Selection.....	17
1.12.1 The Bias-Variance Trade-off.....	17
1.12.2 Cross-Validation	18
1.12.3 Hyperparameter Tuning.....	18
1.13 Model Learning	19
1.13.1 Common Loss Functions	20
1.13.2 Gradient Descent.....	20
1.13.3 Regularization during Learning	21
1.14 Model Evaluation	21
1.14.1 Train, Validation and Test Sets.....	21
1.14.2 Evaluation Metrics for Classification	21
1.14.3 Evaluation Metrics for Regression.....	22
1.15 Model Prediction	23
1.15.1 Inference Procedure	23
1.15.2 Batch vs Online Prediction	24
1.15.3 Confidence and Uncertainty Quantification	24
1.16 Search and Learning.....	24
1.16.1 The Size of the Hypothesis Space.....	24
1.16.2 Search Strategies.....	25
1.16.3 Overfitting as a Search Failure	25
1.17 Data Sets.....	26
1.17.1 Dataset Partitioning.....	26
1.17.2 Class Imbalance	26
1.17.3 Benchmark Datasets	27
1.17.4 Data Augmentation	27
Chapter Summary.....	28
Review Questions.....	29

Chapter II · Nearest Neighbor-Based Models

Chapter Overview	33
2.1 Introduction to Proximity Measures	34
2.1.1 Why Proximity?.....	34

2.1.2	Formal Properties of a Metric	34
2.1.3	The Interplay between Data Type and Proximity	35
2.2	Distance Measures	36
2.2.1	Euclidean Distance.....	36
2.2.2	Manhattan Distance.....	37
2.2.3	Minkowski Distance — A Unified Framework	37
2.2.4	Mahalanobis Distance	38
2.2.5	Hamming Distance.....	40
2.3	Non-Metric Similarity Functions	40
2.3.1	Cosine Similarity.....	41
2.3.2	Pearson Correlation Coefficient.....	42
2.3.3	Tanimoto Coefficient	42
2.4	Proximity between Binary Patterns	43
2.4.1	Simple Matching Coefficient (SMC).....	43
2.4.2	Jaccard Coefficient.....	44
2.4.3	Dice Coefficient	44
2.4.4	Russell-Rao Coefficient	44
2.5	Classification Algorithms Based on Distance Measures	46
2.5.1	Instance-Based Learning: Foundational Concepts	46
2.5.2	The 1-Nearest Neighbor Classifier.....	47
2.5.3	The 1-Nearest Neighbor Rule	48
2.5.4	Distance-Weighted Nearest Neighbors	50
2.6	K-Nearest Neighbor Classifier	50
2.6.1	Algorithm Description	50
2.6.2	The Role of K.....	51
2.6.3	Feature Scaling and Weighting	52
2.6.4	KNN Computational Complexity	53
2.6.5	The Curse of Dimensionality	53
2.7	Radius Distance Nearest Neighbor Algorithm.....	54
2.7.1	Algorithm Description	54
2.7.2	Advantages and Disadvantages.....	55
2.7.3	Adaptive Radius and Density-Sensitive Neighborhoods	55
2.8	KNN Regression.....	56
2.8.1	Unweighted KNN Regression.....	56
2.8.2	Distance-Weighted KNN Regression	57
2.8.3	Kernel Regression Interpretation	57
2.8.4	Choosing K for Regression	59

2.9 Performance of Classifiers.....	59
2.9.1 The Confusion Matrix.....	59
2.9.2 Derived Performance Metrics.....	60
2.9.3 Multiclass Confusion Matrix	62
2.9.4 ROC Curve and AUC	62
2.9.5 Precision-Recall Curve and Average Precision	64
2.9.6 Cross-Validation for Reliable Evaluation.....	65
2.10 Performance of Regression Algorithms.....	68
2.10.1 Mean Absolute Error (MAE).....	68
2.10.2 Mean Squared Error (MSE) and Root MSE (RMSE).....	68
2.10.3 Mean Absolute Percentage Error (MAPE)	68
2.10.4 Coefficient of Determination (R-squared)	69
2.10.5 Adjusted R-squared.....	71
2.11 Comparing and Selecting Classifiers	71
2.11.1 McNemar's Test	71
2.11.2 Bias-Variance Decomposition Revisited	71
2.12 Case Study: Iris Species Classification with KNN.....	72
2.12.1 Dataset Description.....	72
2.12.2 Preprocessing.....	72
2.12.3 KNN Classification with $K = 5$	72
2.12.4 Performance Evaluation.....	73
Chapter Summary.....	74
Review Questions.....	77

Chapter III · Models Based on Decision Trees

Chapter Overview	79
3.1 Decision Trees.....	82
Definition 3.1.1 — Decision Tree Structure.....	82
Example 3.1.1 — Decision Tree for Loan Approval.....	83
Building a Decision Tree (Greedy Algorithm)	83
3.2 Impurity Measures.....	84
Definition 3.2.1 — Impurity Measure	84
3.2.1 Entropy	84
Definition 3.2.2 — Entropy (H).....	84
Example 3.2.1 — Entropy Calculation (Play Tennis Dataset)	84
3.2.2 Information Gain.....	85

Definition 3.2.3 — Information Gain	85
Example 3.2.2 — Information Gain Calculation	85
3.2.3 Gini Index	85
Definition 3.2.4 — Gini Index	85
Example 3.2.3 — Gini Index Calculation	86
3.2.4 Comparison of Impurity Measures	86
3.3 Properties of Decision Trees	86
3.3.1 Advantages	86
Example 3.3.1 — Interpretability Advantage	86
3.3.2 Disadvantages	87
Example 3.3.2 — Overfitting Problem	87
3.3.3 Pruning to Prevent Overfitting	87
3.4 Regression Based on Decision Trees	87
Definition 3.4.1 — Regression Tree	87
Example 3.4.1 — Regression Tree for House Prices	88
3.5 Bias-Variance Trade-off	88
Definition 3.5.1 — Bias and Variance	89
Example 3.5.1 — Bias-Variance in Decision Trees	89
3.6 Random Forests for Classification and Regression	90
3.6.1 Bootstrap Aggregating (Bagging)	90
Definition 3.6.1 — Bootstrap Sample	90
3.6.2 Random Forest Algorithm	90
Example 3.6.1 — Random Forest for Email Classification	91
3.6.3 Why Random Feature Selection Works	91
Example 3.6.2 — Variance Reduction	92
3.6.4 Properties of Random Forests	92
3.7 Introduction to the Bayes Classifier	92
Definition 3.7.1 — Bayes Classifier	92
Example 3.7.1 — Bayes Classifier for Weather Prediction	92
3.8 Bayes' Rule and Inference	93
Definition 3.8.1 — Bayes' Theorem	93
Example 3.8.1 — Medical Diagnosis using Bayes' Rule	94
3.9 The Bayes Classifier and Its Optimality	95
Definition 3.9.1 — Optimality of Bayes Classifier	95
Definition 3.9.2 — Bayes Error Rate	95
Example 3.9.1 — Bayes Error Rate Scenario	95

3.10 Multi-Class Classification.....	96
Definition 3.10.1 — Multi-Class Bayes Classifier	96
Example 3.10.1 — 3-Class Classification: Iris Flowers	96
3.11 Naive Bayes Classifier	97
3.11.1 The Dimensionality Problem	97
3.11.2 The Naive Bayes Assumption.....	97
Definition 3.11.1 — Conditional Independence	97
Definition 3.11.2 — Naive Bayes Classifier	98
3.11.3 Training Naive Bayes	98
Example 3.11.1 — Naive Bayes for Spam Detection.....	98
3.11.4 Laplace Smoothing	99
Example 3.11.2 — Laplace Smoothing	99
3.11.5 Why Does Naive Bayes Work?	100
3.11.6 Properties of Naive Bayes.....	100
Chapter Summary	101
Review Questions.....	102

Chapter IV · Linear Discriminants for Machine Learning

Chapter Overview	109
4.1 Introduction to Linear Discriminants	113
4.1.1 Definition and Classification Rule.....	113
4.1.2 Geometric Interpretation.....	114
4.1.3 One-Dimensional Linear Discriminant.....	115
4.1.4 Two-Dimensional Linear Discriminant.....	115
4.1.5 Why Use Linear Discriminants?.....	117
4.2 Linear Discriminants for Classification	118
4.2.1 Binary Linear Classification	118
4.2.2 Finding the Optimal Discriminant	118
4.2.3 Checking if Data is Linearly Separable	119
4.2.4 Extending to Multi-Class Problems (OvA and OvO)	120
4.3 Perceptron Classifier.....	120
4.3.1 Perceptron Definition and Structure	120
4.3.2 Components of a Perceptron.....	121
4.3.3 Perceptron for AND Gate	122
4.3.4 Perceptron for OR Gate	122
4.3.5 Fundamental Limitation of the Perceptron	123

4.4 Perceptron Learning Algorithm.....	124
4.4.1 Algorithm Definition and Update Rule.....	124
4.4.2 Update Rule Geometric Interpretation.....	125
4.4.3 Perceptron Learning Step-by-Step Example.....	125
4.4.4 Perceptron Convergence Theorem.....	126
4.5 Support Vector Machines	126
4.5.1 Margin, Support Vectors.....	127
4.5.2 Margin Boundaries.....	127
4.5.3 Why Maximum Margin Works Better	128
4.5.4 SVM Optimization Problem Hard Margin.....	128
4.5.5 Computing SVM Margin (Example)	128
4.6 Linearly Non-Separable Case.....	129
4.6.1 Soft Margin SVM and Slack Variables.....	129
4.6.2 Understanding Slack Variables	129
4.6.3 The Role of the Regularization Parameter C	130
4.6.4 Effect of C Parameter Large C vs Small C (Example)	130
4.7 Non-linear SVM.....	131
4.7.1 Non-linear SVM via Feature Mapping	131
4.7.2 Solving the XOR Problem with Feature Transformatio.....	132
4.7.3 The Problem with Explicit Feature Mapping.....	132
4.8 Kernel Trick.....	133
4.8.1 Kernel Function Definition	133
4.8.2 Linear, Polynomial, RBF, Sigmoid.....	134
4.8.3 Understanding the Polynomial Kernel (Example)	134
4.8.4 The RBF (Gaussian) Kernel.....	134
4.8.5 Computing RBF Kernel Values (Example)	135
4.9 Logistic Regression	135
4.9.1 Logistic Regression Model	135
4.9.2 Properties of the Sigmoid Function.....	136
4.9.3 Classification Decision Rule.....	136
4.9.4 Training via Maximum Likelihood Cross-Entropy Loss	137
4.9.5 Making Predictions with Logistic Regression	137
4.9.6 Logistic Regression vs. Perceptron.....	137
4.10 Linear Regression	138
4.10.1 Linear Regression Model	138
4.10.2 Ordinary Least Squares (OLS) Objective	139
4.10.3 Closed-Form Solution Normal Equation	139

4.10.4 Predicting House Prices (Example)	139
4.10.5 Ridge (L2), Lasso (L1), and Elastic Net	140
4.11 Multi-Layer Perceptrons (MLPs)	140
4.11.1 MLP Architecture: Input, Hidden, and Output Layers	141
4.11.2 Importance of Non-Linear Activations	141
4.11.3 Sigmoid, Tanh, ReLU, Softmax	143
4.11.4 Forward Propagation.....	144
4.11.5 How an MLP Solves the XOR Problem (Example)	144
4.11.6 Universal Approximation Theorem	145
4.11.7 Single Layer Perceptron Foundations and Limitations.....	145
4.12 Backpropagation for Training an MLP	145
4.12.1 Backpropagation Gradient Chain Rule	145
4.12.2 Complete Training Algorithm	146
4.12.3 Output Layer and Hidden Layers.....	147
4.12.4 Step-by-Step Backpropagation Calculation.....	147
4.12.5 Batch, Stochastic, Mini-batch.....	149
4.12.6 Learning Rate Scheduling.....	149
4.12.7 Momentum.....	150
4.12.8 Adam Optimizer	150
4.12.9 AdaGrad (Adaptive Gradient).....	150
4.12.10 Nesterov Accelerated Gradient (NAG).....	150
4.12.11 RMSprop (Root Mean Square Propagation).....	151
4.12.12 Xavier/Glorot and He Initialization	151
4.12.13 Batch Normalization	151
Chapter Summary	153
Review Questions.....	161

Chapter V · Clustering

Chapter Overview	165
5.1 Introduction to Clustering.....	169
5.1.1 Definition and Formal Notation.....	169
5.1.2 Why is Clustering Important?.....	170
5.1.3 Similarity and Distance Measures	170
5.1.4 Computing Distance Between Data Points	171
5.1.5 Types of Clustering Approaches.....	171

5.2 Partitioning of Data	172
5.2.1 Partition Definition and Properties	172
5.2.2 Measuring Partition Quality: WCSS and BCSS	173
5.2.3 Evaluating Two Partitions	173
5.3 Matrix Factorization for Clustering	174
5.3.1 Non-negative Matrix Factorization (NMF)	174
5.3.2 How NMF Relates to Clustering	175
5.3.3 NMF Objective Function	176
5.3.4 Multiplicative Update Rules	176
5.3.5 NMF for Document Clustering (Example)	176
5.4 Clustering of Patterns	176
5.4.1 Feature Space Representation	177
5.4.2 Cluster Representation	177
5.4.3 Clustering Iris Flower Patterns (Example)	178
5.5 Divisive Clustering	178
5.5.1 Divisive Hierarchical Clustering Algorithm	179
5.5.2 Splitting Strategies	179
5.5.3 Selecting Which Cluster to Split	180
5.5.4 Divisive Clustering Step-by-Step Process (Example)	180
5.5.5 Advantages and Disadvantages of Divisive Clustering	181
5.6 Agglomerative Clustering	181
5.6.1 Agglomerative Hierarchical Clustering Algorithm	181
5.6.2 Linkage Criteria	182
5.6.3 Agglomerative Clustering Step-by-Step	183
5.6.4 Cutting the Dendrogram	183
5.7 Partitional Clustering	184
5.7.1 Characteristics of Partitional Methods	184
5.7.2 K-Means, K-Medoids, K-Modes, K-Medians	184
5.8 K-Means Clustering	185
5.8.1 K-Means Algorithm	185
5.8.2 K-Means Step-by-Step Example (6 Points, $k=2$)	186
5.8.3 k : Elbow Method, Silhouette Score, Gap Statistic	187
5.8.4 K-Means Limitations	187
5.8.5 K-Means++ Initialization	188
5.9 Soft Partitioning and Soft Clustering	188
5.9.1 Soft Clustering Definition and Membership Values	188
5.9.2 Why Use Soft Clustering?	188

5.9.3 Membership Matrix	189
5.10 Fuzzy C-Means Clustering	190
5.10.1 Fuzzy C-Means Algorithm	190
5.10.2 The Fuzziness Parameter m	190
5.10.3 Fuzzy C-Means Step-by-Step Example	190
5.10.4 FCM vs. K-Means Comparison	191
5.11 Rough Clustering.....	192
5.11.1 Rough Set Approximations.....	192
5.11.2 Intuition behind Rough Clustering	193
5.12 Rough K-Means Clustering Algorithm	193
5.12.1 Algorithm: Classifying Points into Approximations	194
5.12.2 Centroid Update.....	194
5.12.3 Parameters: Epsilon, w_{lower} , w_{upper}	194
5.12.4 Rough K-Means Classification Example.....	194
5.13 Expectation-Maximization (EM) Based Clustering	195
5.13.1 Gaussian Mixture Model (GMM).....	195
5.13.2 The EM Algorithm: E-Step (Expectation).....	196
5.13.3 The EM Algorithm: M-Step (Maximization)	197
5.13.4 EM Clustering Intuition (Example)	198
5.13.5 GMM vs. K-Means Comparison	199
5.14 Spectral Clustering.....	199
5.14.1 Overview and Motivation	199
5.14.2 Step 1: Construct the Similarity Graph.....	200
5.14.3 Step 2: Compute the Graph Laplacian	200
5.14.4 Step 3: Compute Eigenvectors.....	201
5.14.5 Step 4: Form the Spectral Embedding	201
5.14.6 Step 5: Cluster in the Embedded Space	201
5.14.7 Why Spectral Clustering Works Two Moons Example.....	201
5.14.8 Properties of Graph Laplacian Eigen values.....	202
5.14.9 Spectral Clustering Algorithm Summary.....	202
5.14.10 When to Use Spectral Clustering.....	202
Chapter Summary.....	203
Review Questions.....	209
